Measuring quality

Can we quantify quality ?

Hmmm, seems very amorphous.

Can we quantify quality ?

Hmmm, seems very amorphous.

Guess we can come with indicator as a measure.

Can we quantify quality ?

Hmmm, seems very amorphous.

Guess we can come with indicator as a measure.

If we have a reasonable reference
of what may be adequate
then we can setup a simple indicator.

Dashboard #2- System quality

	#TC	%Pass
L9		
L8		
L7		
L6		
L5		
L4		
L3		
L2		
L1		

The reasonable reference
of what may be adequate is TC

The simple indicator of quality is %Pass

Analysing progress

Remember the **session plan**, it was really:

	EUT	TEST	ENV
1	E1	T1	V1

Remember the **session plan**, it was really:

	EUT	TEST	ENV
1	E1	T1	V1
2	E2	T1	V1

Remember the **session plan**, it was really:

	EUT	TEST	ENV
1	E1	T1	V1
2	E2	T1	V1
3	E2	T2	V2
..			
N			

Remember the **session plan**, it was really:

	EUT	TEST	ENV
1	E1	T1	V1
2	E2	T1	V1
3	E2	T2	V2
..			
N			

Progress

is how much we have done wrt plan

Remember the **session plan**, it was really:

	EUT	TEST	ENV
1	E1	T1	V1
2	E2	T1	V1
3	E2	T2	V2
..			
N			

Progress

is how much we have done wrt plan
is %age of 'TC' executed in a test

Defect escapes

Check vs. Test effort

How much checking? How much testing?

Given that in a session we would be doing both
how do they look like?

How much checking? How much testing?

Given that in a session we would be doing both
how do they look like?

How much regression effort?

How much of scripted test effort?

How much unscripted test effort?

How much checking? How much testing?

Given that in a session we would be doing both
how do they look like?

How much regression effort?

How much of scripted test effort?

How much unscripted test effort?

How does this help?

Keeps us aware, so that we don't get into doing 'rote'.

Analysis for clear actions

First understand issues before figuring out how to address them.

Understand what issue types and what EUT .

Then go onto why and what-to-do.

Do not jump into RCA immediately.

Understand WHAT of escapes, then WHY & then WHAT-TO-DO

Understand WHAT of escapes, then WHY & then WHAT-TO-DO

Analyse issues missed for 'what'

- 1 which level these belong to
- 2 which test do these fall into
- 3 what EUT do these belong to (TF | UR | BF)

Understand **WHAT** of escapes, then WHY & then **WHAT-TO-DO**

Analyse issues missed for 'what'

- 1 which level these belong to
- 2 which test do these fall into
- 3 what EUT do these belong to (TF | UR | BF)

Then analyse for 'why'

- 1 did not have TS/TC
- 2 did not do (time issue?)
- 3 did not do correctly (incorrect understanding?)
- 4 did not regress well

Understand **WHAT** of escapes, then **WHY** & then **WHAT-TO-DO**

Analyse issues missed for 'what'

- 1 which level these belong to
- 2 which test do these fall into
- 3 what EUT do these belong to (TF | UR | BF)

Then analyse for 'why'

- 1 did not have TS/TC
- 2 did not do (time issue?)
- 3 did not do correctly (incorrect understanding?)
- 4 did not regress well

Now figure out 'what-to-do'

- 1 tighten quality gates
- 2 improve test quality
- 3 enhance efficiency

A quick summary of IST

RECONNAISSANCE

EXPLORATION

RECOUP

Get a big picture of system and create maps to explore

who are the end users (persona)
what are the needs i.e.system elements (entities)
what are the expectations (attributes)
where will it be used (environment)

Landscaping

who uses what	Persona Map
what is expected of	Scope Map
what affects what	Interaction Map
where is it used	Environment Map

Mapping

RECONNAISSANCE

EXPLORATION

RECOUP

Dive deep to understand entities and then evaluate them

understand what entity does/should do
what are conditions governing behaviour?
what are the acceptance criteria?
what may be potential issues probable?

Deep dive

come up with scenarios to try out
come up with smart checklist to check/test
create suites, review, revise
note down issues, suggestions, observations

Design & validate

RECONNAISSANCE

EXPLORATION

RECOUP

Analyse , Reflect & Learn

Test adequacy

Execution progress

Product quality

Practice effectiveness (Check vs Test & Escapes)

Analysis for improvement

IST Adoption Tips
